Figure 3: Liquid-liquid equilibrium of water/ethanol/1-pentanol/KBr system in a free-salt basis

A procedure is presented for correlating the effect of non-volatile salts on the vapor-liquid equilibrium properties of binary solvents. The original equation for correlating the effects of dissolved salts on vapor-liquid equilibrium, which has been employed extensively with data for entire systems. Vapor-liquid equilibrium data at total vapor pressure of a binary system was raised or lowered by salt. Industrial application of salt effect in vapor-liquid equilibrium. $T \log = f(Nn)$ which is similar to Equation (6), although derived for non-volatile salts.
